DAVID LARSEN

Enterprise Technical Account Manager | Enterprise SaaS | Developer Platforms | Cybersecurity

Baltimore, MD | dc2larsen@gmail.com | linkedin.com/in/david-larsen-404622143 | davidlarsen.me

SUMMARY

Trusted technical advisor to enterprise engineering, security, and platform teams adopting developer-facing security SaaS, including Fortune 5 and Fortune 10 customers running security workflows across hundreds of thousands of developers. Owns post-sales technical strategy across implementation, integration design, identity (SSO, SAML, SCIM), production-risk mitigation, executive communication, and cross-functional escalation. Leads structured technical engagements that assess customer environments, identify risk, and produce prescriptive adoption plans. Advises enterprise customers on AI security strategy, including MCP server deployment, Claude Code hook configuration, secure coding practices, and AI guardrails. Combines hands-on technical depth (APIs, CI/CD, production code, MCP, AI automation) with prior experience building GTM systems and leading post-sales operations at Sentry and Synapse.

CORE STRENGTHS

Enterprise technical account management · Developer-facing SaaS · Cybersecurity and DevSecOps · Software supply chain security · Technical discovery · Implementation strategy · API and systems integrations · Production-risk mitigation · Executive communication · Technical escalation management · Customer health and renewal risk · Expansion support · Product feedback loops · Cross-functional execution · Technical writing · QBRs and EBRs · Adoption strategy · Support and engineering handoffs

TECHNICAL DOMAIN

Security Software supply chain security, SCA, vulnerability management, malware detection, dependency risk, SBOMs, policy enforcement, open source governance, CI/CD security, AI guardrails for secure coding

Identity and access SSO, SAML, SCIM, OAuth, OIDC

Developer ecosystems JavaScript, Python, package managers, private registries, containers, GitHub, GitHub Actions, CI/CD pipelines, Docker

Systems and tooling REST APIs, webhooks, JSON, SQL, CLI tools, bash, MCP, Claude Code, AI automation, Salesforce, HubSpot, Zendesk, Vitally, Gainsight, Linear, Jira, Notion, Slack, Gong, Granola

PROFESSIONAL EXPERIENCE

Enterprise Technical Account Manager

Socket | Sep 2025 – Present | Remote

Owns post-sales technical strategy for enterprise customers adopting Socket's software supply chain security platform across engineering, security, DevOps, and platform teams.

Tech: GitHub, GitHub Actions, Docker, REST APIs, webhooks, SAML, SSO, SCIM, MCP, Claude Code, CI/CD pipelines, private registries, HubSpot, Vitally, Salesforce, Zendesk, Linear

- Own a ~$10.5M ARR book of 45 accounts, four of them over $1M, including three deals over $900K, with Fortune 5 and Fortune 10 customers and security workflows spanning hundreds of thousands of developers and technical stakeholders across security, engineering, platform engineering, and executive leadership.
- Serve as primary post-sales technical advisor for customers implementing supply chain security controls into developer workflows, CI/CD pipelines, package registry policies, and internal governance processes.

- Lead structured technical engagements from kickoff through production adoption: technical discovery, implementation planning, integration risk assessment, stakeholder alignment, rollout sequencing, and executive updates.
- Advise enterprise customers on AI security strategy at Fortune 5 and Fortune 10 scale, including deployment of Socket's MCP server, Claude Code hook configuration, secure coding practices for AI-augmented development, and establishing AI guardrails via Socket's platform.
- Implement and troubleshoot SSO, SAML, and SCIM identity integrations for enterprise customers, including protocol-level debugging across SAML and adjacent identity frameworks.
- Deliver technical workshops and product enablement to enterprise customer engineering teams; trained 40+ developers across customer accounts to drive adoption and accelerate time to value.
- Own high-priority customer escalations involving integration failures, policy behavior, false positives, package metadata, private registries, CI/CD workflows, API usage, and customer-specific environment constraints.
- Surfaced renewal risk on a six-figure enterprise account; partnered with leadership on executive escalation and contributed to successful retention.
- Partner with account executives on renewals and expansions across assigned enterprise accounts; contributed to $3.3M in expansion ARR on my accounts since September 2025.
- Contributed production code to Socket Basics enabling automatic discovery of Dockerfiles in GitHub repositories, reducing configuration friction and improving adoption across customer accounts.
- Partner with product and engineering to reproduce issues, clarify customer requirements, prioritize product gaps, and close feedback loops with strategic accounts.
- Built and authored AI tooling for the post-sales team: rebuilt the quarterly health check process around MCP-driven automation and live product data, integrated Linear with HubSpot and Slack for centralized customer signal tracking, and authored structured AI guideline files for MCP servers and Claude Code agents defining behavioral constraints, guardrails, and integration standards.
- Mentor across sales engineering, sales, technical support, and account management through 1:1s and knowledge sharing sessions.
- Interviewed 20+ candidates for TAM, Customer Success Manager, and Technical Support Manager roles.

SELECTED IMPACT

- Post-sales team NRR of 293%, 200%+, and 1,100%+ in three straight quarters (Nov 2025-Jul 2026).
- Contributed $3.3M in expansion ARR on my accounts since joining Socket.
- Customer base includes Fortune 5 and Fortune 10 organizations; security workflows span hundreds of thousands of developers.
- Trained 40+ developers across enterprise customer accounts through technical workshops and enablement sessions.
- Peer-voted TAM of the Quarter three quarters in a row and Team Player of the Quarter twice. Won Highest Output and Most Valuable Project at the Q4 2025 Customer Engineering Hackathon.

- Implemented Vitally as the company-wide CS platform; platform now supports full company ARR.

GTM Engineer

Sentry | Nov 2023 – Jul 2025 | Remote

Built GTM systems, automation, and AI-driven workflows powering post-sales operations at a developer observability platform.

- Built AI-driven knowledge systems and operational workflows that reduced resolution times by ~20% and increased enterprise customer self-service.

- Engineered 24/7 on-call processes and tooling for enterprise accounts, improving critical response times by ~50%.
- Built incident SLO frameworks and executive RCA reporting systems to communicate platform reliability and risk to strategic accounts.
- Operationalized renewal health, escalation strategy, and expansion planning workflows alongside Customer Success leadership for high-ARR accounts.
- Designed cross-functional incident response workflows connecting support, engineering, product, and account teams for high-severity customer issues.

Senior Manager, Customer Support

Synapse | Jul 2021 – Oct 2023 | Remote

Led technical support and customer escalations at a fintech infrastructure platform.

- Built KPI and SLA frameworks that reduced ticket backlog by ~45% and improved customer satisfaction.
- Owned technical escalations across APIs, authentication, and platform reliability for high-ARR customers.
- Partnered with CS and Sales to reduce churn risk and support expansion motions across enterprise accounts.
- Coordinated with engineering and product on reproductions, root cause analysis, and customer-facing communication for high-severity incidents.

Senior Technical Support Engineer

Contrast Security · Tenable | 2016 – 2021

- Built enterprise security tooling expertise across application security (Contrast) and vulnerability management (Tenable).
- Owned high-severity customer escalations and cross-functional troubleshooting across engineering, product, and customer-facing teams.
- Recognized for customer impact and technical leadership across both organizations.

EDUCATION

B.S. Computer Networks & Cybersecurity University of Maryland Global Campus
